

Feed-in-Tariff for biomass projects using wood waste

This table compares the new and previous feed-in tariffs (**FIT**) for renewable energy projects using biomass from wood residue, forest cleaning, forest trimming and other wood waste (Wood Waste), as determined by Decision C-1/2015 of Bulgaria's State Energy and Water Regulatory Commission.

No.	Renewable energy source	Previous FiT (BGN per MW/h)	New FiT (BGN per MW/h)	Change
1.	Electrical power plants with installed capacity of up to 5 MW operating by the direct burning of biomass from Wood Waste	250.82	179.54	- 28.42 %
2.	Electrical power plants with installed capacity of up to 5 MW operating by the direct burning of biomass from Wood Waste (combined cycle)	278.43	205.25	- 26.30 %
3.	Electrical power plants with installed capacity of up to 200 kW operating by the direct burning of biomass from Wood Waste	350.22	380.94	+ 29.14 %
4.	Electrical power plants with installed capacity of between 200 kW and 5 MW operating by the thermal gasification of biomass from Wood Waste	350.22	310.69	- 11.29 %
5.	Electrical power plants with installed capacity of up to 5 MW operating by the thermal gasification of biomass from Wood Waste (combined cycle)	387.94	347.97	- 10.30 %
6.	Electrical power plants with installed capacity of more than 5 MW operating by the thermal gasification of biomass from Wood Waste.	338.34	296.89	- 12.25 %
7.	Electrical power plants with installed capacity of more than 5 MW operating by the thermal gasification of biomass from Wood Waste (combined cycle)	374.66	334.72	- 10.66 %
